Network Intercept Releases Secure-Me for Google Android

Secure-Me Secures, Protects, and Speeds Up the T-Mobile 3G and Edge Networks for enterprise users.

LOS ANGELES – April 22, 2009 – Network Intercept, an innovator in internet security, is pleased to announce the availability of their Secure-Me software on the Android platform. Secure-Me is the first mobile application to provide 256bit encryption, web acceleration, and virus protection for all web data leaving from and coming to your Android mobile device. Virus protection is handled as an included service which does not require additional device memory. Users will notice their mobile web browsing is up to 3 times faster when using the Secure-Me mobile solution. This unique mobile solution will offer users complete protection from identity theft and internet malware while it provides a better mobile internet experience.

Key Secure-Me product facts:

- 256bit encryption on all web data leaving from and coming to your mobile device
- Accelerated web browsing up to 3 times faster on the Edge and 3G networks
- Data Compression enables users to save money on bandwidth
- Virus protection is handled as a service so it does not consume mobile device memory

Supporting Quotes:

“it is just as easy to download a virus to a phone as it is to a computer; users must think about protecting their internet activities on their mobile devices”

-Christopher Ciabarra, President, Network Intercept

“Web browsing on the 3G and Edge networks is noticeably faster when using Secure-Me”

- Christopher Ciabarra, President, Network Intercept

“As people depend more and more on mobile computing, they need to seriously think about their security”

- Christopher Ciabarra, President, Network Intercept

“People are losing their information without even knowing it. It is estimated that over \$1 trillion dollars has been lost due to internet data theft”

- Christopher Ciabarra, President, Network Intercept

About Network Intercept:

Founded in 2004, Network Intercept is a privately held Internet Security company with offices in NY, San Francisco, and Bangladesh and headquarters in Los Angeles.

Network Intercept has created a series of products to protect businesses as well as individual home users from the known and unknown threats on the internet. Their suite of products provide encrypted and accelerated web browsing, network productivity protection, as well as secure data access to business critical content and personal information.
